

Monash University: Assessment Cover Sheet

Student name	Tan	Sook Mun	
School/Campus	SOIT	Student's I.D. number	30695759
Unit name	FIT3179 Data visualisation - S2 2021		
Lecturer's name	Ting Chai Wen	Tutor's name	Ting Chai Wen
Assignment name	Data Visualisation II Report	Group Assignment: No Note, each student must attach a coversheet	
Lab/Tute Class: 03	Lab/Tute Time: 3pm - 5pm	Word Count: 754	
Due date: 18-10-2021	Submit Date: 18-10-2021	Extension granted <input type="checkbox"/>	

If an extension of work is granted, specify date and provide the signature of the lecturer/tutor. Alternatively, attach an email printout or handwritten and signed notice from your lecturer/tutor verifying an extension has been granted.

Extension granted until (date):/...../..... Signature of lecturer/tutor:

Late submissions policy	Days late	Penalty applied
Penalties apply to late submissions and may vary between faculties. Please refer to your faculty's late assessment policy for details.		

Patient/client confidentiality: Where a patient/client case study is undertaken a signed [Consent Form](#) must be obtained.

Intentional plagiarism or collusion amounts to cheating under Part 7 of the Monash University (Council) Regulations

Plagiarism: Plagiarism means to take and use another person's ideas and or manner of expressing them and to pass these off as one's own by failing to give appropriate acknowledgement. This includes material from any source, staff, students or the Internet - published and unpublished works.

Collusion: Collusion means unauthorised collaboration on assessable written, oral or practical work with another person. Where there are reasonable grounds for believing that intentional plagiarism or collusion has occurred, this will be reported to the Associate Dean (Education) or nominee, who may disallow the work concerned by prohibiting assessment or refer the matter to the Faculty Discipline Panel for a hearing.

Student Statement:

- I have read the university's Student Academic Integrity [Policy](#) and [Procedures](#)
- I understand the consequences of engaging in plagiarism and collusion as described in Part 7 of the Monash University (Council) [Regulations](#) (academic misconduct).
- I have taken proper care to safeguard this work and made all reasonable efforts to ensure it could not be copied.
- No part of this assignment has been previously submitted as part of another unit/course.
- I acknowledge and agree that the assessor of this assignment may, for the purposes of assessment, reproduce the assignment and:
 - i. provide it to another member of faculty and any external marker; and/or
 - ii. submit to a text matching/originality checking software; and/or
 - iii. submit it to a text matching/originality checking software which may then retain a copy of the assignment on its database for the purpose of future plagiarism checking.
- I certify that I have not plagiarised the work of others or participated in unauthorised collaboration or otherwise breached the academic integrity requirements in the Student Academic Integrity [Policy](#).

Date:18/10/2021..... Signature: *Tan Sook Mun* *

Domain

World Happiness Report

Why

To show the happiness score of each country and the analysing the factors contributing to a good outlook in life. To compare different countries happiness scores and how they fare overall.

Who

This visualisation is created for everyone and anyone interested in knowing the global happiness score.

What

The data is taken from different sources in Kaggle and merge into a single JSON file. This [website](#) (The World Happiness Report, 2021).contains the data of the world happiness report from the year 2015 to 2020. This [website](#) (World Happiness Report up to 2020, 2020) however contains the data for the year 2021

Visualisation

The layout of the visualisation is to make as few sightlines as possible. I used pure grid lines in HTML to ensure all my visualisation is aligned properly. The page is also very wide. This is

to ensure there are as minimal white spaces as possible. In the section explaining the factors, the text is justified and added padding to ensure the text is clean and does not overlap. To read the visualisation, it is clear the reader has to read from top to bottom and left to right. The typeface used is simple and easy to read. I only used two different typefaces one for headers and another for normal text. The main header (title) of the report has the largest font while the subheading has a smaller font. The normal text has the smallest font and a simple typeface. Doing this will show a clear visual hierarchy. The storytelling of the entire visualisation is first showing the happiness score of each country then exploring the factors contributing to it.

Map

The map(mark) is to show each geographical location happiness score. I used the colour gradient (channel) of red to green to indicate the happiness score of low to high. The reason for it is because it is intuitive that green means good and red means bad. I also colour locations that do not have data into the colour grey. This is to emphasize the figure-ground.

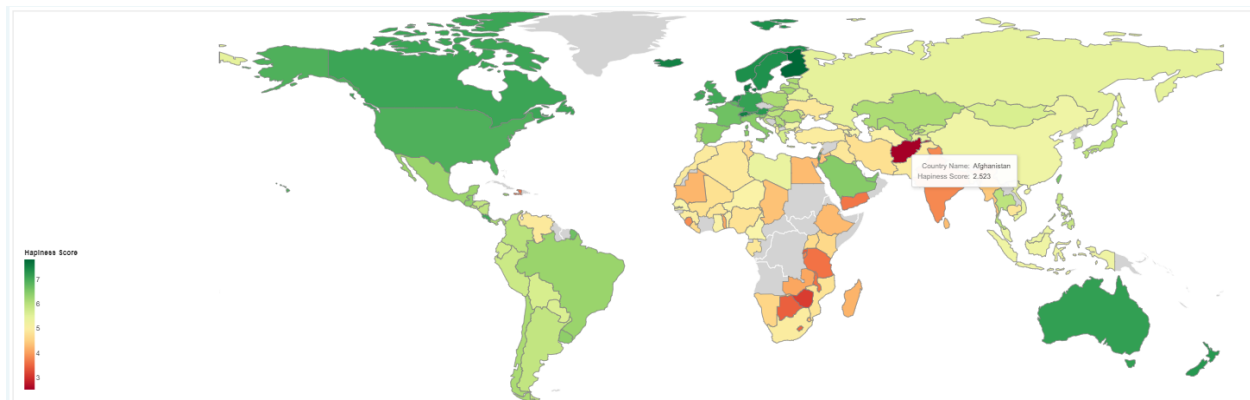

Figure 1: Tooltip of map visualisation

Figure 2: Tooltip of map visualisation when there is no data

Line charts

There are 2 different line (mark)charts. This first is to compare the generosity of the year 2015 and 2021, This is to indicate how much the value had a change in years. It also shows the gap or length of the differences. The wrapped trellis line chart indicates the value of freedom throughout the years. The reason for choosing the countries is because I want to illustrate how countries with a contrasting happiness score fare on a specific value. It also shows the growth or regression of a country freedom score throughout the years. A Colour hue(channel) is used to indicated different countries. In the tooltips, all values are formatted to 3 decimal places for readability.

Figure 3: Line Chart Tooltip

Figure 4: Line Chart 2 Tooltip

Scatter Plot

There is 2 scatter plot. I had to plot different factors against the happiness score and healthy life expectancy and corruption shows the most obvious positive correlation. I chose this scatter plot because it also shows the GDP per capita of the country through the size(channel) of the point (mark), It is able to convey 3 different attributes to users. Users are able to click on the legend to highlight different regions. There is also a slider to filter out the minimum value of GDP. A selection bar is also able to select region user wants to see

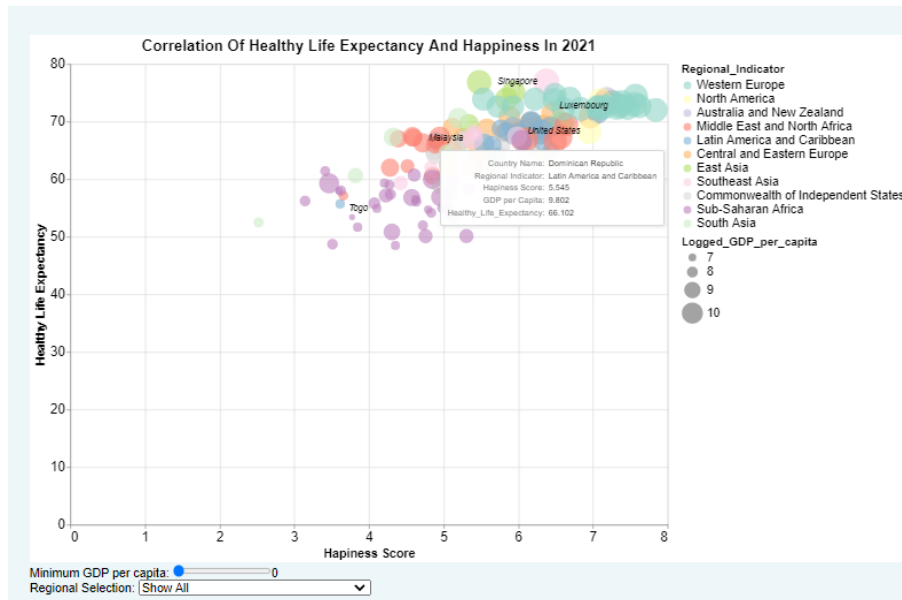

Figure 5: Scatterplot tooltip

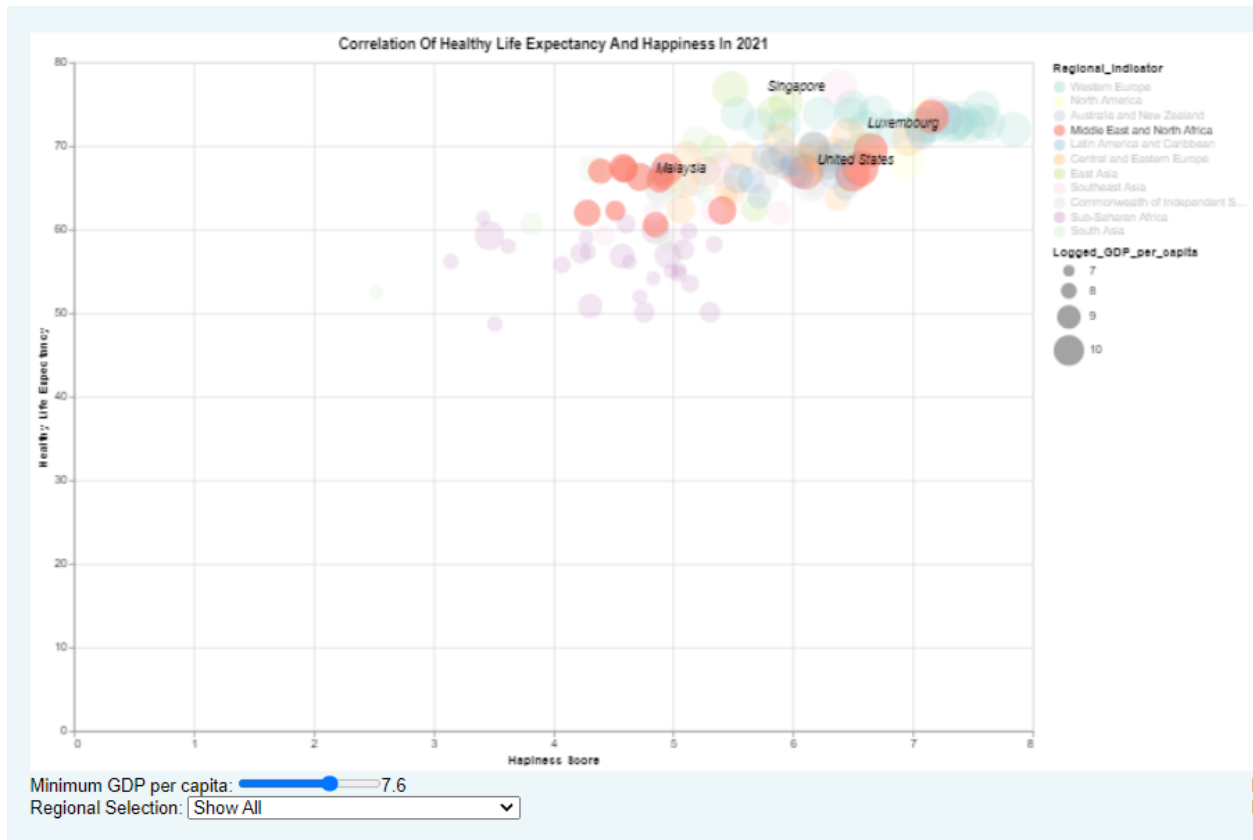

Figure 6: Scatter plot filtering slider and legend highlighter

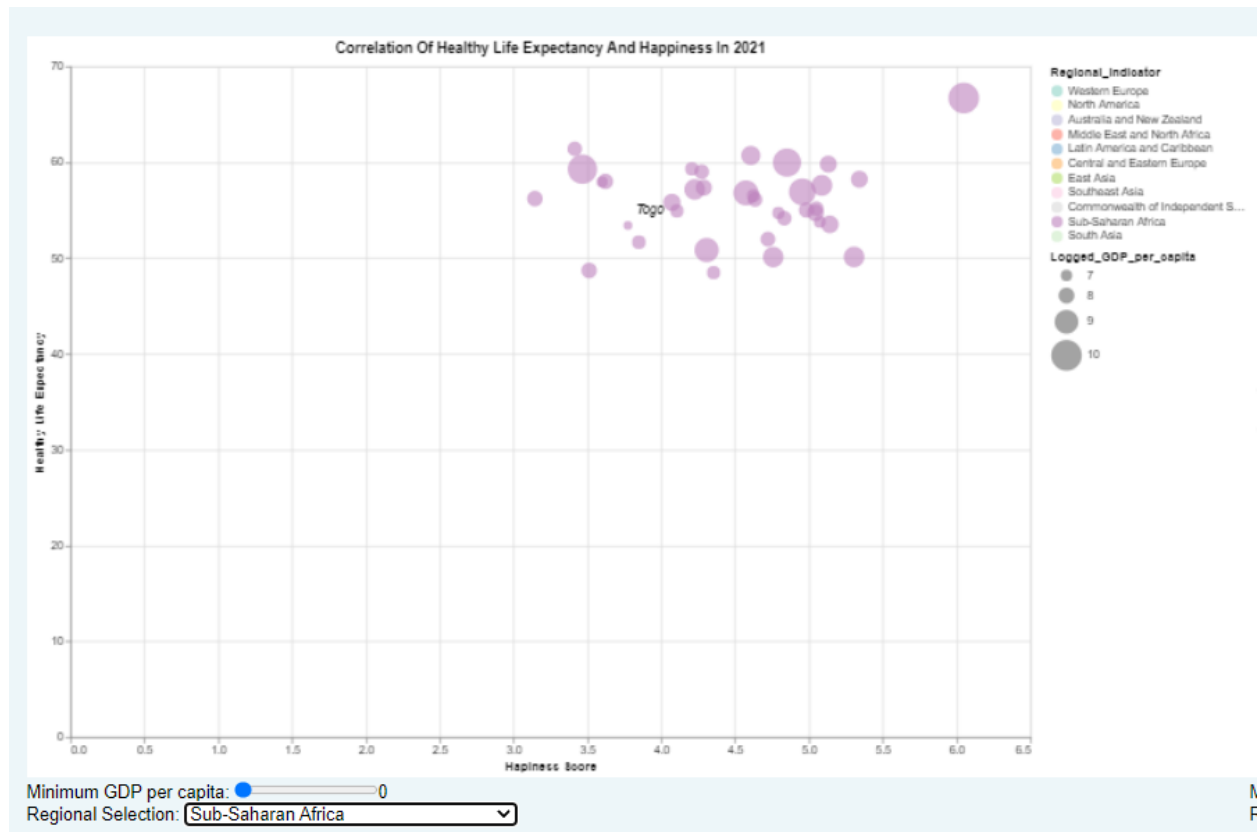

Figure 7: Filter chart with a selection box

Bar Chart

This bar chart shows each country social support score. There is a red dashed line indicating the global average social score. The countries that are highlighted are countries that have social support score that is below the global average. This also plays into the figure-ground of the visualisation. I had used the same colours (channels) to indicate different regions throughout the visualisation. For example, the colour representing Southeast Asia is always represented in pink. There is a slider for interactivity where users can filter out the year. As the user choose the year, the red line will also change according to the year global average of social support. The reader can see which countries manage to improve or regress in social support later years.

QUESTIONS

will this visualisation be useful?

how to show correlation between different factors?

can I show the different countries happiness score objectively?

is this visualisation possible to create?

FOCUS

- show the gradient colours of the map
- show the correlation of happiness score and corruption
- show the mark as gdp per capita to give more context
- show life expectancy of countries
- Use colour hue for region

LAYOUT

No.:

Title

give context of dataset to user

Subtitle

map visualisation

show country happiness score

Fun fact on country

Radial chart

little : World Happiness Report

Author : Tan Sook Mun

Date : 11/10/21

Sheet : 3

OPERATION

- slider to filter out region
- selecting continent will highlight all the other region in other visualisation
- able to zoom in and out of the map
- multiple selection for region and country in stack bar chart

DISCUSSION

- more visualisation compared to sheet 2
- combining simple scatter plot and stack bar chart may be too messy
- not sure if able to create bar chart

FOCUS

- show the comparison of other factors (ie: generosity, social support)
- Show correlation for corruption and dystopian factor
- map show the happiness
- show the life expectancy of each country

LAYOUT

No.:

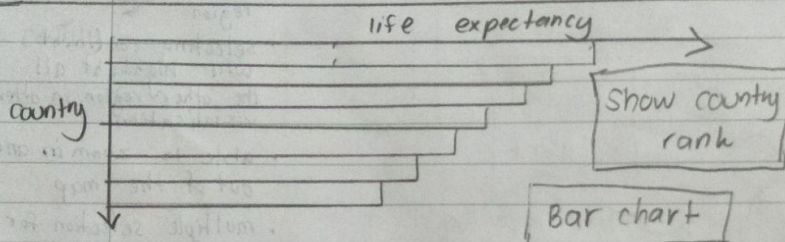

Title

Dataset Explanation

map visualisation

Show country happiness

Ledger

Complex scatter plot

Ledgend

Stack Bar chart

Show other factors

Title : World Happiness report

Author : Tan Sook Mun

Date : 11/10/2021

Sheet : 4

OPERATION

- clicking on the ledger highlight the region
- all visualisation have tooltip
- able to filter the region
- able to filter factors for stack bar chart

DISCUSSION

- is there enough annotations
- is the data vis usefull
- sightlines looks good
- is the filter possible to add into the visualisation

FOCUS

- The focus is the same as previous sheets
- This sheet goes deeper into corellation of gdp and happiness and corruption
- life expectancy is in a bar chart that is ordered
